

FOR IMMEDIATE RELEASE

**AlterG and Soreha Announce Long Term Strategic Partnership
for China**

Fremont, Calif. October 1, 2018 -- [AlterG](#), creator of the [Anti-Gravity Treadmill®](#) technology which has set the standard for body weight supported training and therapy by using patented and precise Differential Air Pressure (DAP), announced today that it has entered into a long term strategic partnership with Soreha — based in Beijing, China. Soreha has been a leader in the Chinese market for active rehabilitation, injury and illness prevention, training, and education for over 16 years. This partnership covers mainland China, Hong Kong, Macau, and Taiwan.

Antoni Mora, chief executive officer of Soreha, said, “AlterG’s Anti-Gravity Treadmill is one of the most innovative products in the medical and sports markets and thus fits in perfectly with our company’s vision and investments. Soreha is continuing to expand its leading position in the Chinese medical and sports markets and this partnership with AlterG enables us to offer an excellent solution that has already helped many patients recover mobility, along with elite and recreational athletes around the world.”

“We are excited at the opportunity to partner long term with a company that provides the full spectrum of technology and education to develop the Chinese market fully,” said Charles Remsberg, CEO for AlterG. “Additionally, the rapid growth in demand for mobility enhancing technology and services in China uniquely positions both companies for meaningful growth.”

Anti-Gravity Treadmill™ technology by AlterG enables unprecedented unweighting therapy and athletic training capabilities. A pressurized “anti-gravity” chamber counteracts gravitational forces, gently adjusting body weight from 100% to as little as 20% with unparalleled precision in 1% increments and unrestricted movement not available in any other form of body weight supported therapy. This uniform lifting force reduces impact, pain, and effort, thereby reducing barriers to mobility. All while supporting normal gait and balance – and encouraging full, free range of motion in a fall safe environment.
